

Sacramento Area Flood Control Agency

# FLOOD RISK MAP of the SACRAMENTO REGION

SAFCA created this map to help agents identify clients in the Sacramento region who are vulnerable to flood risk. The map shows—in green, dark green and blue—the areas that levees protect. However, despite these protections, severe storms can damage our levee system, causing potentially catastrophic flooding.

Because of this threat, SAFCA urges you to:

- Alert your clients to the flood risk in our community, and
- Encourage your clients who have been released from the Federal flood insurance requirement to apply for a low-cost, Preferred Risk flood insurance policy, or PRP.
